

Software Engineering (Principles, Policies & Guidelines) in a Tech-Driven World (Automating Excellence)

07th February 2024

WHY, WHAT and HOW

Fahad Anwar

WHY Software Engineering Principles/Policies...

WHY Software Engineering Principles/Policies...

Purpose *(ONS technical strategy)*

To enable innovation at speed and scale which will keep the ONS providing high quality data and analysis to shape the UK, improve lives and build the future.

WHY Software Engineering Principles/Policies...

Purpose *(ONS technical strategy)*

To enable **innovation at speed and scale** which will keep the ONS providing high quality data and analysis to shape the UK, improve lives and build the future.

WHY Software Engineering Principles/Policies...

Purpose *(ONS technical strategy)*

To enable **innovation at speed and scale** which will keep the ONS providing high quality data and analysis to shape the UK, improve lives and build the future.

Key Principles of ONS Technical Strategy

Move to Cloud

Everything as a Service

WHAT- Defining SE-PPG through Technical Advisory Group (TAG)

WHAT- Defining SE-PPG through Technical Advisory Group (TAG)

Software Engineering Principles/Policies (SEP's) formation through Technical Advisory Group (TAG)

Anwar, Fahad
DDaT Grade 6

SEP Policy (Why, How & Next Steps)

Terms of Reference for TAG to work on SEP

TAG Working Practice (Miro Diagram)

Key Action for next session

It was agreed that in next session TAG will review the communication and implementation plans and will review finalise contents of following:

- Coding Policy & Guidelines
- Technical Documentation Policy & Guidelines
- SEP Phase-1 release planning

Minutes of Meeting (TAG Session)

- 9th TAG Session - 16/01/2024
 - [Minutes of Meeting](#)
- 8th TAG Session - 19/12/2023
 - [Minutes of Meeting](#)
 - [Recording of the Session](#)
- 8th TAG Session - 05/12/2023
 - [Minutes of Meeting](#)
 - [Recording of the Session](#)
- 7th TAG Session - 07/11/2023
 - [Minutes of Meeting](#)
 - [Recording of the Session](#)
- 6th TAG Session - 04/10/2023
 - [Minutes of Meeting](#)
 - [Recording of the Session](#)
- 5th TAG Session - 21/09/2023
 - [Minutes of Meeting](#)
 - Recording of the Session (forgot record the session)

Software Developers Portal

By 2025, 75% of organisations with platform teams will provide self-service developer portals to improve developer experience and accelerate product innovation (Gartner Report 2022).

Unifies infrastructure tooling, services, training, observability, cost tracking, infrastructure scaffolding, and documentation into a single streamlined development interface.

Build from the templates

1. Ensure the code quality and structure as per [Coding Policy/Guidelines](#)
2. Approved libraries are used ([quality policy/Guidelines](#))
3. Create a GitHub repository and assign securities as per ([security/ source control policy](#))
4. Cloud Infrastructure is source automatically covering the [Infrastructure & Deployment Policy](#) (including different environment for testing and production)
5. Test data and integration tests are setup ([quality policy, security policy](#))

Software Developer Portal

Demo (use cases)

I have all these **Software Development Policies, Standards and Guidelines** to follow in my software development.
can anybody do this for me automatically?

I have all these **Software Development Policies, Standards and Guidelines** to follow in my software development.
can anybody do this for me automatically?

Is there a way for me to easily access information about the **Services, API** my team is working on, the **infrastructure** being used and the available **documentation**?

I need to write **ADR** as per **Technical Documentation Policy**, is that can be done through **SDP** and become part of **documentation automatically**

I have all these **Software Development Policies, Standards and Guidelines** to follow in my software development.
can anybody do this for me automatically?

Is there a way for me to easily access information about the **Services, API** my team is working on, the **infrastructure** being used and the available **documentation**?

I need to use Redis database for this project,
can I know if any other team has used it and discuss the existing approach

I need to write **ADR** as per **Technical Documentation Policy**, is that can be done through **SDP** and become part of **documentation automatically**

Can I know what
specific **programming
languages, tools and
framework** are in use,
and in **which project**?

Can I know what specific **programming languages, tools and framework** are in use, and in **which project**?

Can I know which team **owns** what Services, Website, Library etc?

Can I know what specific **programming languages, tools and framework** are in use, and in **which project**?

Can I know which team **owns** what Services, Website, Library etc?

Ok, so we have all this information available in SDP, **can I just Ask it and it tells me?**

Can I know what specific **programming languages, tools and framework** are in use, and in **which project**?

We have **so many repositories/ systems**, it will take **lot of time/effort** to bring them all under SDP?

Can I know which team **owns** what **Services, Website, Library** etc?

Ok, so we have all this information available in SDP, **can I just Ask it and it tells me?**

Q & A

ADOPTION

By 2025, 75% of organizations ... will provide self-service developer portals to improve developer experience and accelerate product innovation.
